PROJECTS

All Applications developed in Flutter

Used best state management methods Getx, Bloc, Provider, Riverpod.

I have used Firebase for databases (Firestore, real-time database).

Firebase Authentication (Social, phone, email).

Firebase Analytics, Crashlytic, Notifications, Deep linking, OTP

Used Isolate to improve app performance and Flutter dev tool to find and fix UI performance issues

Implemented localization, Google Map Integration

Implemented support for multi-theme (Light and Dark theme etc.)

Responsive UI for various sized devices, Custom UI using Custom painter

We have integrated the Rest API and WebSocket.

Admob implementation, Payment Gateway

Native channel to communicate the Flutter app with the native platform.

The local databases we used are Sqflite, Hive, and Drift.

Unit and UI test for App

Used CI/CD tools to make development, testing, and deployment faster

Successfully uploaded apps to the Apple and Google Play stores.
